Please contact Jess for enquiries/registration
jess@themtmagency.com

Course Programme

- Effective emergency response contingency planning and implementation
- Consequences of oil spills
- Spill response options and resource requirements
- Boundaries and roles of Government Agencies and the Industry
- Safety-first culture in response
- Understand PR and media expectations
- International conventions and legal frameworks
- Protecting your organisation's reputation
- Understand how to terminate a response

What will I learn?

This comprehensive course looks at the fundamentals of incident management; from legal frameworks to support during an incident through to response strategies and effective communications.

This course will give you the knowledge and understanding in the following areas:

- Overview of oil spill response including the causes and fates of oil spills and environmental impacts
- Spill assessment and quantification along with identifying the best response techniques and strategies
- Importance of media relations during response operations
- Spill termination and post-spill monitoring
- Claims and compensations and liabilities that sit with responsible parties.
